

## CT-5™ New Co-mingling Chamber

This easy-to-use effluent mixing chamber for small volume medical X-ray, graphic arts, or minilab facilities has a continuous flow-through design with no moving parts.

CT-5 provides a convenient sampling point for developer, fixer, and wash water, allowing a representative sample to be taken.

This innovative unit's internal baffles enhance processor solution mixing by collecting developer, desilvered fixer, and wash water. CT-5 allows sediment to settle prior to solutions flowing to the drain.

**CT-5**

*Treats up four gallons of medical X-ray, graphic arts, or minilab processing solutions*

### **Features and Benefits**

---

- Easy to install and maintain – fittings supplied
- Compact design requires only 1 sq. ft. of floor space
- Low profile to fit inside of processors or under work shelves
- Helps keep drains clear of sediment

### **Part Numbers**

---

- X-ray or graphic arts CT-5: 602645
- Minilab washless CT-5: 602650\*

\*3/4" NPTF inlet fitting only

### **Specifications**

---

**Dimensions:** 12"W x 12"D x 9 1/2" H

**Volume:** 4 gallons (15 liters)

**Material:** Polyethylene

**Inlets:** 2-3/4" NPTF

1-1" NPTF

**Outlets:** 1-3/4" NPTF

1-1" NPTF

*Offered by*

**CPAC Equipment Division**
