## STERI-VAC
## CENTRAL EVACUATION UNIT

Includes spare motor

**Steri-Vac** is designed for affordability, reliability, and easy installation. Its waterless operation is highly economical.

### Ultra-Quiet

Steri-Vac's acoustical housing means quiet operation. This model includes a collection canister to separate solids, permitting recovery of lost crowns and inlays.

### Uses No Water

This environmentally friendly system helps to conserve a precious resource. Injection pump systems may waste as many as 600 gallons per day.

### Simple, Straightforward Installation

Since running water is not used in this system, installation is simple — no water pump to install. Systems are available for 115V or 220-230V to simplify electrical requirements.

### No Down Time

A spare motor is supplied, which can easily be changed *without tools* in minutes — no need to call a dealer service technician.

### High-Volume Evacuation

This system effectively serves multiple operatories. Update your present system or use Steri-Vac as a replacement power source for your current central power unit.
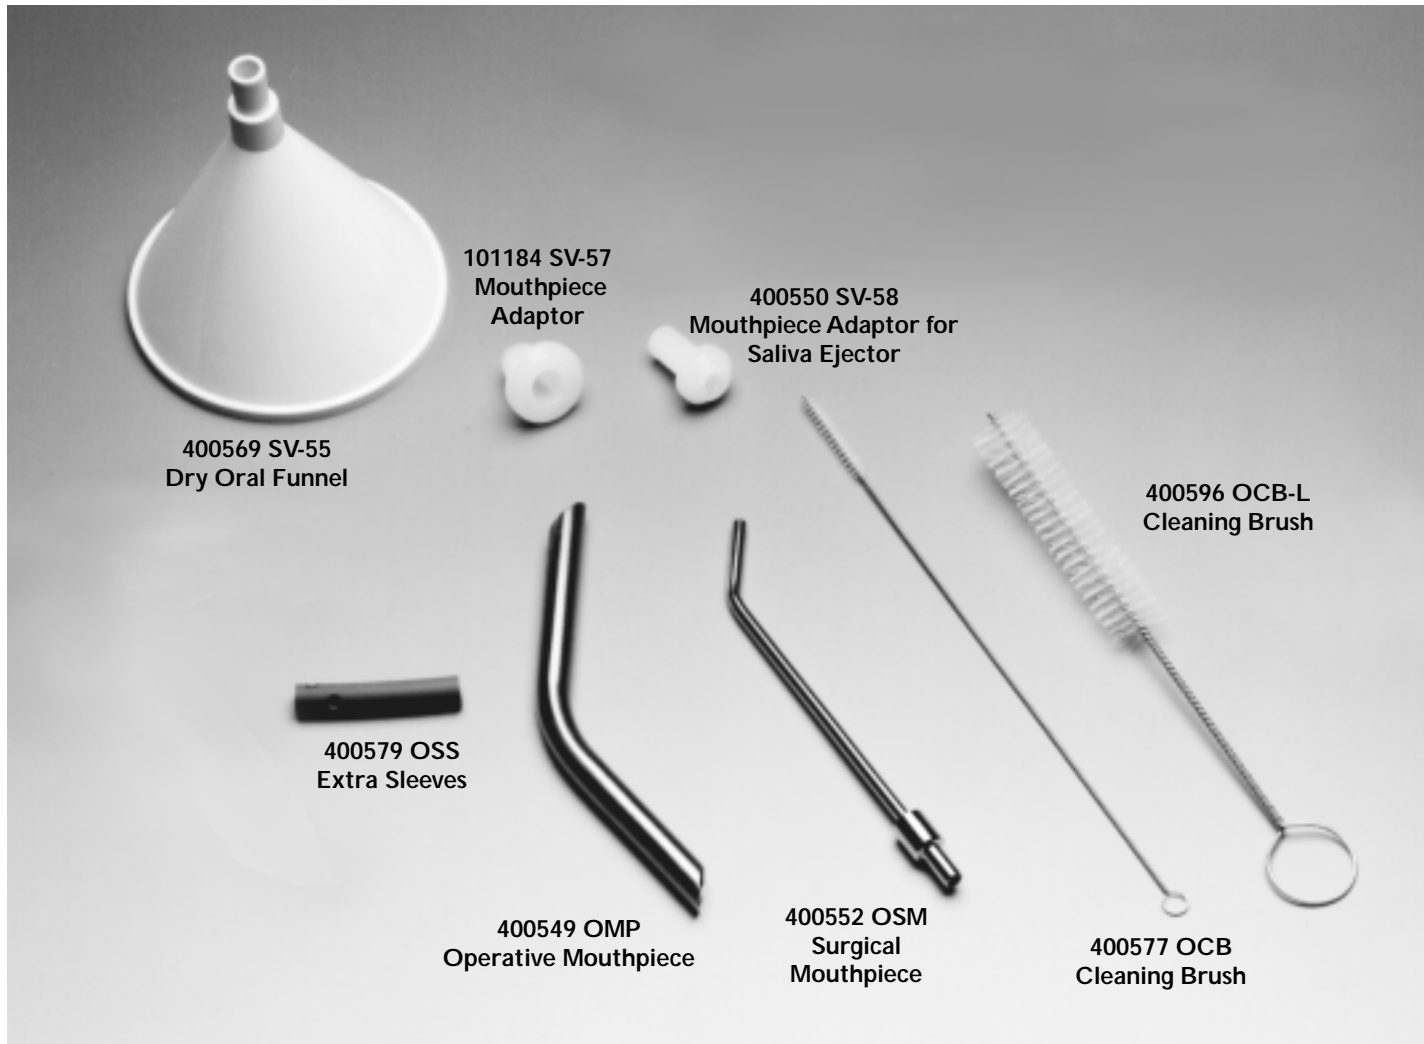

### Specifications

Heavy-duty Motor —
1 ˚ h.p. - 11 amps - 125 cfm

Standard Motor —
7/8 h.p. - 7.9 amps - 95 cfm
